

Central Vacuum Cleaner System

BASIC
AP 00008

PRODUCT

U-series/SM/SX subminiature
switches

APPLICATION DESCRIPTION

Inserting the hose into a wall inlet turns the system on. As the hose is inserted, it pushes a ball bearing in the tube which actuates the switch. Removing the hose shuts the system off. Time and manufacturing costs are saved by assembling the switch package for the customer. The switch, insulating material, and leaf actuator are sent ready to be installed.
