## Tennis Ball Can Filler

LIMIT  
AP 00048

---

---

### PRODUCT

LSS1H side rotary gravity operated  
HDLS (SP/DT)

### APPLICATION DESCRIPTION

A gravity triggered heavy-duty HDLS  
limit switch uses a rod lever to  
determine if any cans contain less  
than three balls.

Again, by positioning the lever at the  
height of the third ball, the HDLS  
can detect the absence of a ball  
because the rod will dip. The switch  
then operates a kicker mechanism  
which removes the can from the line.
