

Dairy/Stable Ventilators

SOLID STATE
AP 00237

PRODUCT

Magnet 105MGR2
Digital position sensor 103SR

APPLICATION DESCRIPTION

A ring magnet is mounted on the ventilator fan axis so that a 103SR sensor mounted in proximity to it can detect the axial rotation. This sensor ensures that the ventilators are functioning, and a constant stream of fresh air is circulated in the building. It also senses the fan speed, which can then be adjusted to modulate the amount of air being blown into the building.
