

Print Shop Conveyor

LIMIT
AP 00047

PRODUCT

Side rotary HDLS

APPLICATION DESCRIPTION

Two heavy-duty LS limit switches, wired in parallel, are positioned 180° apart on a continuous print shop conveyor line. Note that when switch B is opened by a lobe, switch A is closed; when switch A is opened by a catalog, switch B is closed. In both cases, the conveyor circuit to the cutter is held closed. Two catalogs ganged together, however, will cause both switches to open at the same time to stop the conveyor until the orderly flow is restored .
