Miniature Low Pressure
Flow-Through Sensors
24PC Series, Uncompensated/Unamplified
0.5 psi to 250 psi
Miniature Low Pressure Flow-Through Sensors

The 24PC Series Miniature Low Pressure Flow-Through Sensors feature proven sensing technology that uses a specialized piezoresistive micromachined sensing element to offer high performance, reliability, and accuracy.

Each sensor contains four active piezoresistive elements in a Wheatstone bridge configuration. When pressure is applied, the resistance changes and provides an output signal in mV proportional to the input pressure. The pressure sensor is typically excited by constant current. When driven by a constant current source, a silicon pressure sensor’s terminal voltage will rise with increased temperature. The rise in voltage not only compensates for the span but also provides an indication of sensor temperature.

The low power, uncompensated, unamplified Wheatstone bridge circuit design offers 0.5 psi through 250 psi sensing ranges in a variety of pressure port types and termination configurations. The mV output is available in both negative and positive voltage.

These sensors are intended for use with media compatible with plastics and media seals specified in the Nomenclature and Order Guide (see Figure 2). They are designed and manufactured according to ISO 9001 standards.

What makes our sensors better?

• Selectable seals available to match media used
• Higher pressure ranges for use in high pressure applications
• Minimal dead space inhibits bacterial growth
• Available in both SIP and DIP packages
• Available with cable harness to allow off-board sensing
Features and Benefits

In-line use minimizes the number of pneumatic connections and helps reduce system dead space.

FLOW THROUGH DESIGN IN MINIATURE, PLASTIC PACKAGE
Provides a reduced-cost alternative (versus stainless steel package)

INTEGRATED FLOW THROUGH DESIGN
Eliminates the need for many additional connections and parts

By matching pressure ranges to the application, we optimize resolution and improve system accuracy.

VARIETY OF PRESSURE RANGES FROM 0.5 PSI TO 250 PSI
Allows use in a wide variety of applications

ABSOLUTE, DIFFERENTIAL, WET-WET DIFFERENTIAL, GAGE AND VACUUM GAGE MEASUREMENT TYPES
Allow customers to choose the sensor that fits their applications

ROBUST MEDIA COMPATIBILITY
Requires no gel coating

DURABLE
Operable after exposure to frozen conditions

ALSO AVAILABLE IN DIP, SIP, AND SMT PACKAGES
Provides added design flexibility
Potential Applications

HEMODIALYSIS
May be used to monitor the correct pressure to help ensure optimal blood filtration

¹Absolute maximum ratings are the extreme limits the device will withstand without damage.
²Time required for the output to increase from 10% to 90% of span in response to a step change in input pressure from the specified min. to max. operating pressure.

1Span is the algebraic difference between the output signal measured at the upper and lower limits of the operating pressure range, where Port 2 (P2) > Port 1 (P1).

2The output signal obtained when zero pressure is applied to all available ports.

3The maximum deviation of product output from a straight line fitted to the output measured over the specified operating pressure range, calculated according to BFSL. The straight line is fitted along a set of points that minimizes the sum of the square of the deviations of each of the points ("least-squares" method).

4The maximum deviation in offset due to changes in temperature over the compensated temperature range, relative to offset measured at a reference temperature of 25 °C.

5The maximum deviation in span due to changes in temperature over the compensated temperature range, relative to full-scale span measured at a reference temperature of 25 °C.

6Repeatability is the maximum difference between the output readings when the same pressure is applied consecutively, under the same operating conditions, with pressure approaching from the same direction within the specified operating pressure range. Hysteresis is the maximum difference between output readings when the same pressure is applied consecutively, under the same operating conditions, with pressure approaching from opposite directions within the specified operating pressure range.

7Overpressure is the maximum pressure that may safely be applied to the product for it to remain in specification once pressure is returned to the operating pressure range. Exposure to higher pressures may cause permanent damage to the product. Unless otherwise specified, this applies to all available pressure ports at any temperature within the operating temperature range.

WARNING
PERSONAL INJURY
DO NOT USE these products as safety or emergency stop devices or in any other application where failure of the product could result in personal injury.
Failure to comply with these instructions could result in death or serious injury.

WARNING
MISUSE OF DOCUMENTATION

- The information presented in this product sheet is for reference only. Do not use this document as a product installation guide.
- Complete installation, operation, and maintenance information is provided in the instructions supplied with each product.
Failure to comply with these instructions could result in death or serious injury.

WARRANTY/REMEDY
Honeywell warrants goods of its manufacture as being free of defective materials and faulty workmanship. Honeywell’s standard product warranty applies unless agreed to otherwise by Honeywell in writing; please refer to your order acknowledgement or consult your local sales office for specific warranty details. If warranted goods are returned to Honeywell during the period of coverage, Honeywell will repair or replace, at its option, without charge those items it finds defective. The foregoing is buyer's sole remedy and is in lieu of all other warranties, expressed or implied, including those of merchantability and fitness for a particular purpose. In no event shall Honeywell be liable for consequential, special, or indirect damages.

While we provide application assistance personally, through our literature and the Honeywell website, it is up to the customer to determine the suitability of the product in the application.

Specifications may change without notice. The information we supply is believed to be accurate and reliable as of this printing. However, we assume no responsibility for its use.

Find out more
Honeywell serves its customers through a worldwide network of sales offices, representatives and distributors. For application assistance, current specifications, pricing or name of the nearest Authorized Distributor, contact your local sales office.
