Datasheet

DESCRIPTION

The SS360NT, SS360ST, SS360ST-10K, SS460S, SS460S-T2, and SS460S-LP High Sensitivity Latching Digital Hall-Effect Sensor ICs are small, sensitive and versatile devices that are operated by the magnetic field from a permanent magnet or an electromagnet. They are designed to respond to alternating North and South poles. The SS360NT is turned on by a North pole while the SS360ST, SS460S, SS460S-T2, and SS460S-LP are turned on by a South pole. These sensor ICs offer reliable switching points with a high magnetic sensitivity of 30 G typical (55 G maximum). They do not use chopper stabilization on the Hall element, providing a clean output signal and a faster latch response time when compared to competitive high sensitivity Hall-effect latching sensor ICs which do use chopper stabilization. These products offer reverse polarity protection, deliver a stable output over a -40°C to 150°C [-40°F to 302°F] temperature range, and can accept any dc supply voltage from 3 Vdc to 24 Vdc. For brushless dc motor manufacturers who need latching sensors with reliable, consistent performance for more efficient and smaller designs, Honeywell's High Sensitivity Hall-Effect Latching Digital Sensor ICs respond to low magnetic fields and offer consistent repeatability while delivering faster response times to a change in magnetic field for better motor efficiency.

These products are available in four package styles:

- **SS360NT, SS360ST, SS360ST-10K:** SOT-23 surface-mount package, pocket tape and reel
- **SS460S:** Flat TO-92-style with straight standard leads, bulk package
- **SS460S-T2:** Flat TO-92-style with formed leads, ammpack tape-in-box
- **SS460S-LP:** Flat TO-92-style with straight, long leads, pocket tape and reel

FEATURES

- Fastest response time in its class
- No-chopper-stabilization
- High sensitivity
- Latching magnetics
- Wide operating voltage range of 3 Vdc to 24 Vdc
- Built-in reverse voltage
- Durable design
- RoHS-compliant material meets Directive 2002/95

POTENTIAL APPLICATIONS

Industrial/commercial

- Brushless dc motor commutation
- Speed and RPM sensing in electric motors and fans
- Tachometer, counter pickup
- Robotics control
- Flow-rate sensing for appliances

Transportation

- Brushless dc motor commutation
- Electronic window lift, anti-pinch power window systems
- Vehicle convertible roof position

Medical

- Medical equipment using electric motors

PORTFOLIO

The SS360NT, SS360ST, SS360ST-10K, SS460S, SS460S-T2, SS460S-LP are a part of Honeywell's family of Latching Digital Hall-effect Sensor ICs which also include:

- VF360NT, VF360ST, VF460SP
- SS360PT, SS460P, SS460P-T2
- SS361CT, SS461C
- SS361RT, SS461R
- SS400 Series, SS500 (select catalog listings)
- VF526DT (dual outputs)

NOTICE

These Hall-effect sensor ICs may have an initial output in either the ON or OFF state if powered up with an applied magnetic field in the differential zone (applied magnetic field >Brp and <Bop). Honeywell recommends allowing 10 μs after supply voltage has reached 5 V (SS360NT, SS360ST, SS360ST-10K) or 3 V (SS460S, SS460S-T2, SS460S-LP) for the output voltage to stabilize.

NOTICE

The magnetic field strength (Gauss) required to cause the switch to change state (operate and release) will be as specified in the magnetic characteristics. To test the switch against the specified limits, the switch must be placed in a uniform magnetic field.

NOTICE

Absolute maximum ratings are the extreme limits the device will momentarily withstand without damage to the device. Electrical and mechanical characteristics are not guaranteed if the rated voltage and/or currents are exceeded, nor will the device necessarily operate at absolute maximum ratings.
