

Model LW7C AC-AC

Submersible* Displacement Transducer

DESCRIPTION

Model LW7C submersible displacement transducer is often ideal for drilling, mining, and hydraulic engineering applications which require a displacement transducer with a stainless steel, water-proof construction. This model may be used as direct measuring

linear displacement device or positional feedback element in dynamic systems. They are suitable for submersion in fresh water and some corrosive fluids for long periods. The captive guided spring return armature is fitted with a ball ended probe.
