

## Fire Trucks

CURRENT  
AP 00028

---

**PRODUCT**

CSD current sensors

**APPLICATION DESCRIPTION**

Aerial ladder fire trucks have many side opening compartments. The driver needs to know when one or more of these compartment doors were open before moving the vehicle. Since each door has a MICRO SWITCH door interlock for compartment lamps, the solution was to monitor the current to each compartment lamp. If current is present to the lamp, the door must be ajar.
