1.0 INTRODUCTION
There are four methods, depending on the sensor’s port type, that may be used to pneumatically connect Honeywell’s TruStability® Board Mount Pressure Sensors to the end user’s system. These methods are tubing, O-rings, epoxy, and clamping.

2.0 TUBING
Plastic tubing is a common method of pneumatically connecting to a sensor. The type of tubing selected (i.e., Superthane®, silicone, and vinyl) depends on the sensor’s working pressure range and operating temperature.

Silicone tubing tends to be the easiest to connect to a sensor; however, its working pressure is not as high as that of other tubing materials.

The lower the tubing’s shore number, the easier it is to insert the tubing onto the sensor’s port. The lower shore tubing, however, also has lower working pressures. For working pressures of 20 psi and below, silicone or vinyl tubing tend to be used. For pressures above 20 psi, Superthane® or low-density polyethylene tubing can be considered.

Match the tubing to the application’s required working pressure and maximum operating temperature. (See Table 1.)

NOTICE
To apply a more rigid tubing-to-port connection, use a low-power heat gun to slightly heat the tubing. Once cooled, the tubing will grip the port better.

Technical Note
Pneumatic Interface Recommendations for Honeywell
TruStability® Pressure Sensors

3.0 O-RINGS
O-rings may also be used to connect pneumatically to the sensor. This method is generally used for sensors with the LN, MN, SN, and NN ports.

- Silicone or fluorosilicone O-rings are commonly used as they tend to take less of a set over temperature when compared with O-rings made of other materials.
- Most O-ring manufacturers recommend a compression of 20% to 25% to provide the proper O-ring compression over the temperature range.
- Use a 70 Shore 2-006 O-ring to connect to the NN and SN ports.
- Use a 2-015 O-ring for the MN port.
- Use a 2-005 O-ring for the L port. Two O-rings provide a better seal, although one O-ring may also be used.

4.0 MANIFOLD MOUNTING USING EPOXIES OR RTV SILICONE
For working pressures under 30 psi, epoxy or RTV (Room Temperature Vulcanization) silicone may be used to connect the MN, SN, and NN ports to a manifold.

- When epoxy, ensure it is compatible with Zytel® plastic, the sensor’s plastic housing material. Silicones are compatible with Zytel plastic.
- When applying epoxy to a port, ensure the sensor’s pressure or vent holes are not blocked.
- When using an exothermic reactive epoxy (gives off heat during cure), ensure its exothermic reaction doesn’t increase the sensor’s temperature above its storage temperature of 85 °C [185 °F].
- When using a temperature-cured material, ensure the combined curing temperature/exothermic reaction temperature does not exceed the sensor’s storage temperature. Use a given epoxy’s lower curing temperature to help ensure the sensor’s storage temperature is not exceeded.

5.0 CLAMPING
When the working pressure is 15 psi or less, clamps are not typically required to ensure the tubing remains in place and doesn’t leak. Each application is different; however, each end use must be considered before deciding if clamps are necessary. Such considerations include vibration, pressure spikes, temperature, and the tubing being used.

Clamping methods include:
- Plastic cable ties. Found in most hardware stores, ties come in a variety of sizes. The advantage of ties is that they are relatively easy to install and tend to stay in place over time.
- Plastic hose clamps. Two manufacturers are HellermannTyton Products (Snapper clamps) and Cole Parmer. They work with the A, NB, F, G, and H ports; however, for the R port, plastic cable ties are preferred due to the small port size. The exact size needed depends on the OD (out diameter) of the tubing used with the sensor.

Warranty. Honeywell warrants goods of its manufacture as being free of defective materials and faulty workmanship. Honeywell’s standard product warranty applies unless agreed to otherwise by Honeywell in writing; please refer to your order acknowledgement or consult your local sales office for specific warranty details. If warranted goods are returned to Honeywell during the period of coverage, Honeywell will repair or replace, at its option, without charge those items it finds defective. The foregoing is buyer’s sole remedy and is in lieu of all warranties, expressed or implied, including those of merchantability and fitness for a particular purpose. In no event shall Honeywell be liable for consequential, special, or indirect damages.

While we provide application assistance personally, through our literature and the Honeywell web site, it is up to the customer to determine the suitability of the product in the application.

Specifications may change without notice. The information we supply is believed to be accurate and reliable as of this printing. However, we assume no responsibility for its use.
